

EDUCATION & CERTIFICATIONS

MS in Computer Science: University of Central Missouri, Lees Summit, Missouri

May 2023 - Present

BTech in Electronics and Communication Engineering: Malla Reddy Engineering College, Hyderabad, India **Jul-2017 – Jun 2021**

Certifications: Microsoft Certified: SC-900 // Microsoft Certified: AZ-900

SKILLS

Software Development || CI/CD || JSON || Data Structures & Algorithms || Software Architecture || Problem-Solving || Version Control || TFS || Database Management || ORMs || Authentication & Authorization || Containerization || Testing || RESTful API Development || Data Analysis || Project management || State Management || Collaboration || Root cause analysis || Quality assurance || Object Oriented Programming || Communication || Time Management || Adaptability || Attention to Detail
Microsoft project || Microsoft excel || pivot tables || VBA || Advanced Excel || Microsoft word || Microsoft PowerPoint || Power BI

Backend Programming: C#, Java, Python, Node JS, Express, C, .Net, .Net Core, ASP .Net MVC

Frontend Programming: React JS, Angular, HTML, CSS, JavaScript

Database: MySQL, MongoDB, PostgreSQL, GraphQL, IBM Db2, Entity Framework, ADO .Net, AWS & Firebase relational database

Cloud Services: Azure, Google Firebase, AWS (EC2, Elastic Beanstalk, Amplify)

PROFESSIONAL EXPERIENCE

Graduate Professional Team Lead, MERN Stack Developer-University of Central Missouri, Lees Summit, MO May 2024 – Aug 24

- Lead a team of graduate and undergraduate developers in the end-to-end development of a college website for managing student clubs.
- Overseeing the entire development lifecycle, from planning and requirements gathering to implementation, testing, and deployment, ensuring timely and successful project delivery.
- Utilized the MERN stack (MongoDB, Express.js, React.js, Node.js) and Java to build a dynamic, responsive, and scalable application, ensuring a seamless user experience.
- Led the team in applying best practices for coding, version control, and deployment, ensuring maintainability and high-quality code throughout the project.

Custom Software Engineering Analyst, .Net Full Stack Developer- Accenture, Hyderabad, India

Dec 2022 – Apr 2023

- Spearheaded the development and implementation of web applications using C#, ASP.NET, React JS, and MVC, resulting in a 20% improvement in user experience and a 30% boost in application performance. Optimized database interactions by designing complex schemas and utilizing SQL databases like PostgreSQL and cloud data warehouses such as Snowflake.
- Partnered with cross-functional teams to refine project requirements, leading to the successful delivery of high-quality software solutions. Applied a detailed understanding of SQL and NoSQL databases to ensure scalable and efficient data architecture.
- Enhanced application usability across devices by applying responsive web design techniques, and optimized data access through Entity Framework, reducing data retrieval times and improving application efficiency.
- Engineered and maintained RESTful APIs, facilitating seamless integration with external systems and improving data sharing, which led to increased business process efficiency. Collaborated closely with DevOps teams to automate deployment pipelines, enhancing deployment efficiency and reducing manual intervention.
- Played a pivotal role in migrating legacy applications to the latest .NET framework, significantly enhancing both performance and security. This included re-architecting database interactions and optimizing queries using advanced SQL techniques such as window functions, merge statements, and multiple joins.
- Engineered and deployed robust APIs using Node.js and JavaScript within a continuous integration (CI) environment, ensuring seamless integration and deployment processes. Managed version control with Git, ensuring consistency and collaboration across the development team, and leveraged TFS for efficient work item tracking, source control, and release automation.
- Developed and maintained complex data models and architectures for PostgreSQL and Snowflake, ensuring efficient data storage and retrieval. Applied strong SQL proficiency to write sophisticated queries, optimizing performance for data-driven applications.
- Collaborated with the testing team to reduce post-release issues by 20% through thorough defect identification and resolution, ensuring robust and high-quality software delivery.

Custom Software Engineering Associate – Accenture, Hyderabad, India

Sept 2021 – Nov 2022

- Designed and implemented the model-view-controller architecture, ensuring clear separation of concerns and enhancing the flexibility of the web application.
- Integrated various components, including user authentication, data management, and front-end interfaces, to deliver a fully functional and user-friendly website.
- Developed and maintained batch processing jobs to automate data handling tasks, significantly improving the efficiency of recurring business operations.
- Scheduled and managed jobs to run at specified intervals, ensuring timely data processing and minimizing system downtime.
- Utilized scheduling tools and frameworks to monitor job performance, troubleshoot issues, and optimize execution times.

- Built detailed and customized reports using SQL Server Reporting Services (SSRS) in alignment with specific business logic and stakeholder requirements.
- Worked closely with business analysts to understand reporting needs and translated these into actionable, data-driven insights.
- Optimized report generation processes, reducing execution time and ensuring accuracy and reliability in report outputs.
- Managed and interacted with IBM Db2 databases, executing complex queries to retrieve and manipulate data according to business needs.
- Designed and optimized database schemas, enhancing data storage efficiency and retrieval speeds.
- Collaborated with database administrators to maintain database performance, integrity, and security, ensuring reliable data access for application users.

C1 Engineer, Power BI Developer – LTIMindtree, Bangalore, India

Jul 2020 – Aug 2021

- Utilized Python for data transformation, preparing large datasets for analysis by cleaning, filtering, and restructuring. Leveraged tools like Pandas and NumPy for manipulating big data efficiently within the AWS ecosystem, supporting seamless integration with Hadoop, Spark, and other cloud technologies.
- Automated data workflows using Python to streamline processes, reducing manual tasks and minimizing errors. Collaborated with project managers to address system challenges related to ramping, sustaining, and dispositioning materials across the product lifecycle. Utilized machine learning frameworks like TensorFlow and Sci-kit Learn to implement predictive models for process optimization.
- Applied expertise in big data tools like Hive and Kafka to handle data ingestion and processing within scalable architectures. Demonstrated a strong understanding of statistical concepts like regression, neural networks, and time-series forecasting, enhancing data-driven decision-making.
- Developed interactive, visually compelling reports using Power BI, leveraging advanced Python visualizations. Customized visuals to meet business objectives, providing actionable insights. Additionally, built dashboards that communicated key trends and findings using machine learning insights.
- Optimized data source connections, including cloud storage, ensuring seamless integration with Power BI, Hadoop, and other big data platforms. Managed data refresh schedules and troubleshooting to ensure up-to-date reports.
- Demonstrated proficiency in data modeling, DAX, and Power Query for advanced data transformation. Created intuitive dashboards in Power BI and Tableau, transforming complex data into actionable insights to support decision-making.

Associate Professional Software Engineer, Java Full Stack Developer – DXC Technology, Hyderabad, India

Jan 2020 – Jun 2020

- Developed a comprehensive Point-of-Sale (POS) web application, contributing to the streamlining of retail operations.
- Acquired in-depth knowledge of full-stack Java development, which was applied in the design and development of RESTful APIs to ensure seamless frontend-backend integration.
- Utilized Java, Spring Boot, and Hibernate to build a robust backend for the POS application, enhancing scalability and performance.
- Conducted extensive testing, including unit and integration testing, to ensure the application's reliability and robustness.
- Implemented microservices architecture, improving modularity and maintainability of the application.
- Streamlined the development process by employing Jenkins for build automation and deployment.
- Conducted detailed analysis and design to create modern data solutions that met client needs and adhered to industry standards.
- Actively participated in code reviews, fostering adherence to best practices and continuous improvement within the development team.

PROJECTS/CASE STUDY

MERN Stack Application: TICKET-MASTER / Next JS, Prisma, GraphQL, MongoDB, AWS Amplify

Jan 2024 – Apr 2024

- Developed a full-stack web application named TICKET-MASTER as part of my academic curriculum, showcasing my proficiency in modern web development technologies and full-stack implementation.
- Designed and implemented user functionalities allowing individuals to view available football matches, book tickets, and manage their bookings, including the ability to cancel reservations.
- Developed comprehensive administrative functionalities enabling admins to manage match fixtures, stadium information, ticket pricing, and availability.
- Implemented secure authentication and authorization mechanisms to ensure that only authorized personnel could access and modify critical match and ticket data.
- Built the application using **Next JS** for server-side rendering and enhanced performance, and **Prisma** as an ORM to manage and interact with the database efficiently.
- Leveraged Prisma's capabilities to design and optimize the application's database schema, ensuring fast and reliable data retrieval for both users and admins.
- Utilized **GraphQL** to build a flexible and efficient **API**, allowing clients to request exactly the data they need, reducing over-fetching and under-fetching issues.
- Implemented complex queries and mutations in GraphQL to handle various user and admin operations, such as booking tickets, managing fixtures, and updating stadium information.

Project Management Tool / React JS, Node JS, MongoDB

Aug 2023 – Dec 2023

- Developed a project management tool like **Jira**, designed to facilitate efficient project and team management.
- Users can create and manage multiple projects with ease. Ability to create teams and assign them to specific projects.
- Create, update, and track user stories throughout the project lifecycle. Assign user stories to team members, ensuring clear task distribution and accountability.
- Developed an intuitive and user-friendly interface with **React JS**, enhancing user experience.
- Implemented **Node JS** for efficient server-side operations, ensuring quick and reliable performance.
- Utilized **MongoDB** for flexible and scalable data storage, accommodating the dynamic nature of project and user story data.
- Employed **GIT** for effective version control, facilitating seamless collaboration and code management among team members.
